PREVENT THE SPREAD OF INFECTION

Why is it important to use a Sharps Container?

It is standard practice in developed, and even underdeveloped countries for used needles to be placed immediately into a sharps container after a single use, with only a few exceptions to the general rule. Sharing needles is often the cause of AIDS (HIV) and other blood-borne infections spreading among intravenous drug users. For this same reason, it is extremely important to place used sharps into sharps container in order to prevent spreading infection from needlestick injuries to medical personnel.

SHARPS CONTAINERS ARE SPECIALLY MADE CONTAINERS USED TO CONTAIN HAZARDOUS "PIERCING" INSTRUMENTS AND REDUCE THE CHANCE OF SPREADING INFECTION.

Sharps is the term used to describe any item that is capable of puncturing the skin such as syringes, needles, lancets, broken glass with blood on it, scalpels, etc. Because these 'sharps' potentially have disease-carrying blood or other potentially infectious materials on them, they are capable of 'injecting' that blood or fluid into anyone who comes in contact with them.

Examples of sharps include:

- Needles, syringes, lancets, broken glass with blood on it
- Suture needles, scalpel blades, butterfly (both traditional and safety)
- Vacutainer tubes (both plastic and glass)
- Phlebotomy needles with vacutainer tube holder attached
- Capillary tubes (both plastic and glass)
- IV catheters
- Dental anesthetic carpules with blood
- Dental wires and endodontic files
- Other sharp objects contaminated

SHARPS CONTAINER CUP MODEL 120T X 90B X 115H MM (0.8 LITER)

Ref. # I10-01

Description:

Sharp containers are designed to hold sharps medical objects such as needle from disposable syringes to prevent spread out of the diseases and protect health care practitioner from injury when dealing with used sharp objects.

Features:

- /// Built in cup model
- /// Has yellow color for container and red color for the lid
- /// Has easy to operate cover and give sufficient window to insert the sharp objects
- /// Dimension; height 115 mm, base diameter 90 mm, top diameter 120 mm
- /// Capacity 0.8 L

SHARPS CONTAINER CUP MODEL 140T X 110B X 150H MM (1.5 LITER)

Ref. # I10-02

Description:

Sharp containers are designed to hold sharps medical objects such as needle from disposable syringes to prevent spread out of the diseases and protect health care practitioner from injury when dealing with used sharp objects.

Features:

- /// Built in cup model
- /// Has yellow color for container and red color for the lid
- /// Has easy to operate pop up cover and safety clip to assure sharp objects stay in the container
- /// Dimension; height 150 mm, base diameter 110 mm, top diameter 140 mm
- /// Capacity 1.5L

SHARPS CONTAINER BOX MODEL 245 X 200 X 165 MM (5.0 LITER)

Ref. # I10-03

Description:

Sharp containers are designed to hold sharps medical objects such as needle from disposable syringes to prevent spread out of the diseases and protect health care practitioner from injury when dealing with used sharp objects.

Features:

- /// Built in box model
- /// Has yellow color for container, semi transparent white color for top cover, and red color for handle and lead
- /// Has easy to operate cover and give sufficient window to insert the sharp objects
- /// Dimension; 245 x 200 x 165 mm
- /// Capacity 5 L
